

Shimadzu Electronic Balances General Catalog

Shimadzu began manufacturing balances in 1918. For more than 100 years, we have been at the forefront of providing precision, quality solutions for the most challenging R&D and QA/QC requirements. Our steadfast customer-focused commitment and unwavering dedication to technical excellence are both hallmarks of our history and the principles that guide us into the future.

Supporting manufacturing in the future, utilizing 100 years of experience and knowledge

SHIMADZU ELECTRONIC BALANCES

A Tradition of Weighing Expertise

Established in 1875 in Kyoto, Japan, Shimadzu Corporation is one of the pioneers of scientific precision instruments.

Top-pan and torsion balance production started in 1918, and equal-beam analytical balances were introduced in 1925. Since their release, the continuous improvement of Shimadzu balances has contributed to research and development across all industries.

Around the turn of the 20th century, precision weighing was a time-consuming practice performed only by experienced operators. Placing the sample and small masses on pans hung from a beam scale with a moving indicator was a tedious process. Shimadzu strove continuously to streamline weighing procedures. The introduction of the direct reading analytical balance (patented in Japan in 1948) signified a new era in weighing technology. In the Type L balance, the sensitive mass-loading work was replaced by convenient dial operations. This reduced weighing time by 66% and, subsequently, reduced demand for conventional balances.

Shimadzu then added the top-loading direct reading balance with Roberval's mechanism in 1959. Until recently, many of these instruments were still utilized in modern laboratories.

Shimadzu continued to pioneer technologies, releasing its first

electronic balance in 1971—the Digibalance. This release marked a milestone in precision weighing, introducing simplicity and ease of use to analytical weighing.

Six years later (1977), the application of microprocessors in electronic balances further enhanced weighing performance. The compact ED Series provided substantial improvements in sensitivity, resolution, and stability.

More recently, Shimadzu has introduced user-friendly instruments and features to the market, such as:

temperature-based fully-automatic calibration in 1985, the first one-piece force cell (OPF, later renamed UniBloc™) in 1989, the high-sensitivity AEM-5200 Micro Balance in 1993, and the unique Windows® Direct feature perfectly suited for the computerized laboratory of the 21st Century.

Its most recent achievement is the AP Series, advanced performance balances featuring UniBloc and a high response speed, and which are applicable for a wide range of applications.

Moving forward, Shimadzu is committed to providing innovative products for the analytical marketplace.

UniBloc Power!

Shimadzu balances advance to the UniBloc generation

Impact resistance test for four balances made by typical manufacturers. (Shimadzu internal test)

Test results of impact resistance test with top-loading balances (Minimum display: 10 mg)

Test conditions Free-falling the weight (3 kg) at 4 sec intervals.

(Weight was dropped 100,000 times from a height of 5 mm. After the first 100,000 tests, it was dropped from a height of 10 mm.)

The results of this impact resistance test prove Shimadzu UW/UX series balances with UniBloc technology are the toughest. Put Shimadzu balances in your lab and experience UniBloc power.

UniBloc technology leads to a new era of measurement

Shimadzu introduced one-piece force cell technology for precision balances in 1989. Today's UniBloc is created by high-precision electric discharge wire processing applied to a block of aluminum alloy, and replaces the conventional electro-magnetic balance sensor assembly. UniBloc's compact, uniform structure ensures stable temperature characteristics, excellent response time and stable corner-load performance.

In addition, the UniBloc design permits a consistency of production that assures reliability and a long operational life.

The updated UniBloc technology expands the UniBloc balance lineup, which now ranges from semi-micro with a minimum display of 0.01 mg to precision platform balances up to 52 kg in capacity.

One-piece force cell patented in USA in 1989, No. 4799561, in China in 1991, No. 12729, in Japan in 1995, No. 1905686

UniBloc family of balances

Shimadzu Balances Offer a Diverse Range of Functions

01

High Level Functionality

Kasy Setting

During operation, if you want to make the display slightly more stable, or alternatively, want to improve the response speed, you can make one-touch adjustments without interrupting measurement. A special indicator is provided that instantly shows the adjustment status.

Menu Operation Key

Easy-to-Operate Key Layout

Keys exclusively for menu operations are arranged separately from the measurement keys. Menus can be operated intuitively using the cross-shaped key layout.

Perfect Self Calibration

Electronic balances are precision instruments very susceptible to changes in room temperature. Sensitivity must be calibrated every time the balance is used since changes in room temperature influence mass measurement values, which are not supposed to change. The balance detects changes in room temperature that affect sensitivity, and automatically starts calibration using built-in weights. As a result, sensitivity errors are always kept within a constant range.

This allows the operator to concentrate on measurement tasks without having to worry about sensitivity calibration.

The perfect self calibration (PSC) function keeps the sensitivity error within a constant range at all times.

Clock-CAL

The balance starts calibration using built-in weights at preset times. If you set calibration times before important measurements (e.g. before starting work in the morning or during the lunch or evening break), the balance will automatically start calibration when the preset time is reached. This lets you

take stable, reliable measurements without worrying about sensitivity calibration.

02

Durability

Uni Bloc

Next-Generation Mass Sensor: UniBloc

Developed by Shimadzu, UniBloc is created by high-precision electric discharge wire processing applied to a block of aluminum alloy in order to replace the conventional sensor block assembly. As such, it uses no springs or screws. This uniform structure dramatically improves response and temperature characteristics, and the simple yet compact design enhances impact resistance. Balances equipped with UniBloc provide highly reliable mass measurement even during prolonged use.

03

Convenient Functions

Internal Calibration

The balance has built-in motor-driven calibration weights.

Sensitivity can be calibrated whenever needed with a single key press.

Single-Lever CAL

The balance has built-in calibration weights. Sensitivity is calibrated with a simple lever operation. Sensitivity can be calibrated easily, whenever needed.

Dry Battery Operation

The balance can also run on dry cell batteries, enabling use outdoors where no power is available.

Checkweighing

Preset the upper and lower limit values to display pass, high or low, depending on the sample weight.

Gomparator Output

Proper weight, high, low and other pass/fail judgments can be indicated by a buzzer, or output externally as a contact signal. (Optional comparator buzzer or relay output interface required.)

Backlight

Naturally, weight measurements can be taken even if the work site is dark, and prolonged use at normal work sites will not tire your eyes.

GLP GMP

Built-in Clock

With the optional printer connected, data can be recorded with date and time stamps. Calibration reports can also be date- and time-stamped, which is ideal for establishing the measurement management and traceability required by GLP, GMP and ISO 9001.

ISO Calibration Report

Simply connect an optional printer to automatically print out which balance was calibrated when, and the calibration results. Absolutely no troublesome settings are required. Furthermore, the current date and time can be printed at any time during measurement.

(AUW Series Printout Sample)

PC Connection

Balance Keys

Using Balance Keys, a balance data collection software, allows importing balance data directly to a user's applications with the intuitive feel of keyboard input. In addition, data from multiple balances can be imported.

RS-232C Interface

Equipped with an RS-232C interface for easy integration with other devices and computers.

Computer Connection Function

Systems can be connected to a computer via an optional cable/adapter kit. For more details, visit the Shimadzu website.

Network

LabSolutions™ Balance

Connecting with LabSolutions lets you save data from balances, HPLC and other analytical instruments to a database, and create reports automatically. Uniform data management means no transcription errors and is perfect for security.

Applications

Piece Counting

A built-in piece counting function enables balances to be used as parts counters (piece scales).

the immersion method is built in. Just attach the optional Specific Gravity Measurement Kit to use a balance as a specific gravity meter.

Built-in Animal Measurement Mode

The weight of mice, rats, rabbits, and other small animals can be measured. Stable measurements are obtained even if the animal moves.

Carat Measurement

Results can be displayed in carats when measuring precious stones.

Excellent Performance for Multiple Industries

- Weigh liquids and powders in development departments
- Measure specific gravity and moisture ratio of resin pellets, rubber, etc.
- Input mass values via connection to a titration system for quality management
- Measure mass and moisture ratio of dyes, pigments, and inks
- Measure and control materials accumulated on filters
- Control moisture ratio levels during catalyst production
- Check weights when receiving raw materials
- Confirm the net weight of final products
- Measure the moisture ratio and control the quality of raw materials and products
- Weigh trace quantities of additives
- Weigh raw materials during formulation

- Control pharmaceutical usage quantities by measuring weight before and after use
- Weigh raw materials
- Confirm the weight of stents and other miniature medical devices
- Measure the moisture ratio and control the quality of raw materials and products
- Measure weight changes during animal experiments
- Measure drugs during drug manufacturing processes
- Measure weight changes in creams and compresses at specified intervals
- Control the quality of product containers and cases
- Measure the moisture ratio of hair, etc.

- Count the number of very small products
- Check the weight of coated steel sheets/plates after polishing
- Control the moisture ratio and specific gravity of iron and steel raw materials
- Measure trace quantities machined from metals, etc.
- Measure the specific gravity of rare metals and compare it to theoretical values
- Control the amount of wear on metal materials
- Weigh items when purchasing precious metals or bullion

Electronics

- Check weights when manufacturing electronic circuit boards
- Measure tiny semiconductor parts
- Check for missing items in product packages based on weight
- Control the quantity of plastics used in LED lenses

- Measure electrolyte injection quantities on lithium-ion battery production lines
- Measure moisture ratio in sheet materials
- Control contamination remaining on machinery parts

- Use for training students
- Manage reagent use by weight, in combination with a chemical substances management system
- Use in lectures to explain basic principles and theory

AP Series

Advanced Performance UniBloc Balances

Provides High-speed Response and High Stability A New Stage in Analytical Balance Performance

High Speed

This significantly improves weighing efficiency.

Stress Free

This eliminates the influence of static electricity, achieving reliable measurements in a simpler

For Regulation

Interlocking with LabSolutions Balance enables compliance with a variety of data integrity regulations, including ISO 17025 for testing laboratories, ISO 9001 and ISO 14001 for the manufacturing industry, and GLP/GMP and the United States Pharmacopeia (USP) for the pharmaceutical industry.

Functions are included for the preparation of buffer solutions used in HPLC. As a result, the operation can be performed accurately and easily, even by non-specialists.

Save Your Operation

Equipped with USB as standard*1. Includes many diverse functions to support users.

Series

High Speed

Fast measurement significantly improves operational efficiency.

Fast Response with UniBloc AP Technology

Shimadzu analytical balances boast the one-piece UniBloc weighing sensor, which is now even more advanced.

The response time is reduced to about 1/5 the time of previous models. In addition, the UniBloc sensor offers a response time of just 2 seconds, an improvement from 10 seconds with the previous model.

Response During Trace Measurements with the 0.01 mg Model (Equivalent to 1 mg / With Conditions Set by Shimadzu)

Response During Trace Measurements with the 0.1 mg Model (Equivalent to 1 mg / With Conditions Set by Shimadzu)

Model	Previous Model	AP Series
0.01 mg	10 sec.	2 sec.
0.1 mg	7 sec.	1.5 sec.

Built-in High-Performance Ionizer (Optional)

Comparison of Neutralization Speed (Representative Values)

Measurement Conditions

- Time from ±1000 V to ±100 V
- For this evaluation, a 150 × 150 mm charged plate monitor (CPM, 20pF) was used.
- Distance between CPM and ionizer: 100 mm

The ionizer eliminates influence of static electricity in 1/10 the time of previous models.

Note: Example of typical static electricity removal time ($\pm 1000 \text{ V} \rightarrow \pm 100 \text{ V}$) 1 sec. for STABLO-AP and 10 sec. for STABLO-EX (previous model)

AC Method with

Stress Free

A variety of accessories and options suitable for semi-micro measurements

Highly Sophisticated Simulation Technology

Increased weighing capacity from 135 mg to 220 g (0.01 mg model)

Micro amount weighing over 135 mg (read 0.01 mg step) is possible.

Improved Sensitivity Stability When Ambient Temperature Changes

The temperature of the operational environment is affected by the external air temperature, turning off the air-conditioning, people entering the room, etc. The stability with respect to these small temperature variations in the operational environment has been improved. When the ambient temperature has changed by +1 °C in 20 minutes, the AP225W provides an improvement in the stability of the sensitivity by a factor of four compared to the previous model.

 Change in Sensitivity When Repeatedly Weighing 200 g (Measurement carried out by Shimadzu)

(When the ambient temperature has changed by +1 °C in 20 minutes)

Previous model

Time [min.]

Improved Minimum Weight

(Minimum display 0.01mg, AP225W/135W/225WD/125WD only)

By improving stability technologies, the minimum weight required for meeting USP Chapter 41 requirements has been improved from 30 mg to 20 mg.

The AP Holder (standard accessory for AP225W) compatible with a variety of weighing containers is provided standard, and static electricity is properly removed from the bottom of the container, resulting in easier operation.

→ The AP Holder in combination with the ionizer can eliminate the influence of static electricity on the weight value.
See page 23 for more information.

Volumetric flask (100 mL)

Test tube (10 mL)

AP Holder

Containers that can be used with the AP Holder (Examples)

Container	Applicable Volume*
Volumetric flask	10 to 100 mL
Conical flask	100
Beaker	100 mL
Centrifuge tube (Spitz tube)	2 . 25
Test tube	3 to 25 mL

^{*} About 70 mm or more height or length is required.

Easy-to-Use Multi Stand

(0.01 mg model only, equipped as standard)

With weighing paper, for example, if the tare is larger than the pan diameter, measurements can be simplified by attaching the special multi stand.

The internal windbreak plate suppresses the influence of convection and air flow within the weighing chamber, improving the stability and response of measurement values.

Series

For HPLC

Buffer Solution Preparation Mode **NEW**

(AP-W Series only)

•Recipes for 13 commonly used buffer solutions are included

Preparation recipes for commonly used buffer solutions are provided as standard. e.g. disodium phosphate, sodium acid citrate

New buffer solution recipes can be registered

If a buffer solution is not registered by default, it can be added.

Instructions are shown on the display

The target weighing value is shown on the display and analog bar in order to compare the target with the current weight. Manual calculation is not needed.

Record function

Record output with date, time and operator name.

The pH level of mobile phase (eluent) solutions used in liquid chromatographs is adjusted to improve separation of components and extend the life of columns. This pH adjustment process is performed using a buffer solution. Currently, the most common method is using a pH meter to measure the pH as the solution is prepared; however, this process requires considerable time and effort, which can cause operational bottlenecks.

An alternative method does not require a pH meter. It involves preparing solutions by weighing fixed theoretically calculated quantities of an

AP series supports weighing these acids and bases. If the type and quantity of the buffer solution are specified, the balance displays the type and quantity of sample that should be weighed. Then the buffer solution can be prepared easily by adding water to the specified quantity of

Preparation example: When weighing and preparing 50 mM of di-sodium hydrogen phosphate, 2-hydrate and 50 mM of sodium dihydrogenphosphate, 2-hydrate in order to prepare 3 L of 100 mM phosphoric acid (sodium) buffer solution at pH = 2.1:

Example of preparation by AP series

solution

Number		Buffer solution preparation list	
1	100 mM	phosphoric acid (sodium)	pH = 2.1
2	10 mM	phosphoric acid (sodium)	pH = 2.6
3	50 mM	phosphoric acid (sodium)	pH = 2.8
4	100 mM	phosphoric acid (sodium)	pH = 6.8
5	10 mM	phosphoric acid (sodium)	pH = 6.9
6	20 mM	citric acid (sodium)	pH = 3.1
7	20 mM	citric acid (sodium)	pH = 4.6
8	10 mM	tartaric acid (sodium)	pH = 2.9
9	10 mM	tartaric acid (sodium)	pH = 4.2
10	20 mM	acetic acid (ethanolamine)	pH = 9.6
11	100 mM	acetic acid (sodium)	pH = 4.7
12	100 mM	boric acid (potassium)	pH = 9.1
13	100 mM	boric acid (sodium)	pH = 9.1

^{*} Results can be printed with date/time and user ID

For Users of HPLC Systems

Sample Preparation NEW

(AP-W Series only)

When preparing a standard solution from a particular component, the standard powder for this component will be a hydrochloride or a hydrate. Preparing a standard solution of the target component at a desired concentration requires difficult calculations prior to weighing it. With the AP series, however, the required weight value is automatically calculated, so it can be weighed without performing manual calculations.

Example of preparation by AP series

Weigh 25 mg Amitriptyline to make a standard solution

Standard sample of Amitriptyline is Amitriptyline Hydrochloride.

Calculation is essential to determine part of Acidum hydrochloricum by molecular weight in order to make a 100 mg/mL Amitriptyline solution.

Molecular weight of Amitriptyline: 277.4

Molecular weight of Acidum hydrochloricum: 36.5

Molecular weight of Amitriptyline Hydrochloride: 277.4 + 36.5 = 313.9

To compare the molecular weight of Amitriptyline Hydrochloride with Amitriptyline, the following calculation is necessary.

313.9/277.4 = 1.132

The molecular weight of Amitriptyline Hydrochloride is 1.132 times of Amitriptyline.

So, if 25mg of Amitriptyline is used, it follows that the weight of Amitriptyline Hydrochloride should be:

 $25 \text{ mg} \times 1.132 = 28.3 \text{ mg}.$

Hence, 28.3 mg of Amitriptyline Hydrochloride is needed to make the correct standard solution.

Standard solution of Amitriptyline

Amitriptyline Hydrochloride

Amitriptyline Acidum hydrochloricum Molecular weight Molecular weight 277.4 36.5

No need for manual calculation

AP series can automatically calculate the sampling weight using the molecular amount of the standard sample, molecular weight of unnecessary sample, and the target value in order to reach the correct concentration solution.

Just weigh the target weight value on display and the target weight of the standard sample can be obtained.

"OK" mark shown when target weight is reached.

Checking weighing conditions on the same display

Series

Save Your Operation

USB Offers Greater Expandability NEW

Equipped with an RS-232C connector, a USB device and a USB host as standard. You can now simultaneously send output to both a computer and printer or connect a USB flash drive, a barcode reader, or an external numeric keypad.

Transcription errors can be avoided and data can be recorded without a computer.

USB host is available for AP-W Series

USB flash drive

Connecting a USB memory device allows you to record large amounts of weighing data in CSV format. Used in combination with the interval output function, it enables recording of long-term changes over time.

Example of a record: File name Date and time Weighing value

* The information saved will differ depending on the function used.

(USB host: AP-W Series only)

Display capture function

Weighing display can be recorded into USB memory in BMP format. User name, date/time, and setting can be shown with display information.

The user name, time, measurement conditions, pass/fail judgments, and other information displayed on screen can be saved as is, enabling the recording of measurements and checks after measurements.

Numeric keypad

Connecting a common external numeric keypad makes it easier to enter numeric values. This is especially useful for entering the mass value of weights, setting upper/lower limit values for the comparator function, or entering the sample count during piece counting mode.

Barcode reader

A barcode reader can be connected. Simply reading a barcode makes it possible to input user ID/Password. It is possible to manage sample IDs using barcodes.

An ID and password are needed to log in to the AP series if protected access is activated. With the barcode, an operator can log in by scanning the barcode instead of inputting an ID and password.

^{*} The latest information can be seen from the Shimadzu website (https://www.shimadzu.com/an/balance/)

Equipped with USB as standard.*1 Includes many diverse functions to support users.

*1 AP-W Series only

Easy-to-Read Organic EL Display

(All models)

Because the pixel elements in the organic electroluminescence display emit light, the screen can be seen clearly even in dark locations. Multi-language display capability*2 provides a more intuitive operating interface. A wider viewing angle has also improved the visibility of measurement values, which helps increase the efficiency of measuring operations.

*2 English, Chinese and Japanese

Clearly visible from the side

English example

Exceptional Visibility

The visibility remains the same even when viewed from different angles. The viewing angle is a wide expanse of ±85 degrees, both vertically and horizontally. That means the display is clearly visible even when working beside the balance. A high-resolution dot-matrix display makes it easy to read detailed text.

Periodic Inspection Support Function NEW

(AP-W/AP-X Series only)

AP series supports periodic inspections. The function allows inspection of repeatability, corner load error, and linearity by simply following instructions displayed on the screen.

Example of printing

Printing sample

	REPEATABILI	ΓY

Wide Variety of Functions to Support Users

Smart Settings (All models)

Response and stability settings can be changed during measurements with a single touch. Changing the settings for different applications can make it even easier to use.

makes it easier to operate the balance. Conversely, moving it toward [S] makes it easier to stabilize weight values, which can improve readability in environments with vibration.

The indicator is operated using the left and right arrow keys. Moving the setting toward [R] prioritizes response, which

User-friendly arrow keys

Moving it left prioritizes response and moving it right prioritizes stability. Five setting levels are available.

Specific Gravity Measurement

(All models)

In combination with an optional specific gravity measurement kit, the balance can be used to measure specific gravity. Operations are simplified by a text-based navigation function. By using sinkers, the specific gravity of liquid can be measured as well. This allows measuring the specific gravity of metals, rubbers, plastics, and other materials easily.

First measure the empty weight

Then place it in the container filled with water, as instructed on the screen.

The specific gravity value is displayed using simple steps.

For Better Weighing Results

(AP-W/AP-X Series only)

• Two internal weights provided

0.01 mg models are calibrated at 2 points with the internal weights (weight value and 1/2 value).

• Includes Perfect Self Calibration (PSC) function

The analytical balance automatically detects any temperature changes that could affect sensitivity and automatically starts calibration.

The Clock-CAL function enables automatic calibration at a pre-specified time (for example, before starting work, during lunch, or after work hours).

PSC (Perfect Self Calibration)

The Reason the AP Holder in Combination with the Ionizer Can Eliminate the Influence of Static Electricity on the Weight Value

Why is the AP Holder needed as a countermeasure to static electricity?

If the AP Holder and the STABLO-AP ionizer are used together, static electricity can be quickly removed from the entire test chamber, including the surfaces of glass containers, which helps to decrease the weighing time and improve reliability.

AP Holder

Example of Removing Static Electricity from a Flask

The conical flask is directly placed on the pan.

lons emitted from the ionizer cannot reach the bottom of the flask, so removal of static charge from the bottom of the flask is insufficient. Therefore, Coulomb forces act between the surrounding metal parts and the windshield door, which affects the weight value.

The bottom of the flask is in close contact with the pan, so removal of the static charge is obstructed, leading to an unstable weight value.

The conical flask is tilted using the AP Holder and placed on the pan.

Using the AP Holder to separate the flask from the pan, the ions supplied by the ionizer reach the locations where there is static charge on the bottom of the flask. This improves the neutralization effect and results in a stable weight value.

The AP Holder can hold the container in a tilted position, so the charge can be reliably removed from the bottom of the container being mounted on the AP Holder.

 $^{^{\}star}1$ Minimum display 0.01 mg models include two internal weights (see page 22 for details).

^{*2} Be compliant with USP Chapter 41. This is the tested value by the weight of the balance's capacity 5% (or 5 grams' weight). In the case of the AP225W, the results are for tests carried out with the optional internal windbreak plate applied. The minimum weight value is affected by the installation environment, so it is necessary to measure it in the actual environment of use.

 $^{{\}bf ^{*3}}$ The response time for displaying 90% of the added sample amount value in trace measurements (from 1 mg)

^{*4} The response time value is typical.

^{*5} Non-condensing.

Static Remover (Ionizer)

Shimadzu's proprietary ionizer for analysts troubled by static charging of samples or containers

One-touch attachment and removal adds even more convenience

— an excellent solution against **Static electricity**.

STABLO-AP provides reliable measurement by removing static electricity.

Features of STABLOAP

Static Electricity Removal by Ion Irradiation

With the high-frequency AC corona discharge method, Shimadzu's STABLO-AP ionizer provides a stable ion balance and excellent static removal performance on samples and containers.

Precision weighing work becomes remarkably efficient. Electrodes are safely housed inside the unit.

Concept of static removal

ions are emitted in rapid alternation

Well-balanced mixture of positive/negative

Ions are applied to sample. Only the opposite charge ions are

Negative static charge is neutralized by positive ions.

0000

AC Method Produces Excellent Ion Balance

AC method: AC voltage is applied on the discharge needle and a well-balanced mixture of positive/negative ions is emitted in rapid alternation from one electrode.

DC method: DC voltage is applied to a couple of electrodes. One is positive and the other is negative. Each electrode emits ions of one polarity only. An effective static removal angle is limited if the two electrodes are distanced. As electrodes deteriorate, initial ion balance is lost.

AC method DC method $\oplus \ominus \ominus \oplus$: Effective area

What is "ion balance"?

Ion balance is the balance of positive and negative ions that are supplied by an ionizer. If ion balance is poor, static electricity is not removed or inverse charging may result.

Not neutralized (negative charge remains)

Inversely charged (results in positive charge)

Application

Static electricity keeps the sample out of the ampoule

The sample is hard to handle because it adheres to the ampoule inlet and sides.

STABLO-AP removes the charge from the

The static charge is gone in seconds. This improves productivity.

Plastic wrap sticks to rubber gloves

Plastic wrap adheres to rubber gloves, making it difficult to work with.

Fasten STABLO-AP to the stand, and remove the static from the gloves.

The static is removed in about 10 seconds, and the plastic wrap no longer sticks.

STABLO-AP is convenient when using an electronic balance

When the powder in the Petri dish is electrically charged, and the numerical value fluctuates

When the powdered medicine paper is electrically charged, and the numerical value is unstable

When the measurement spoon is electrically charged, and bringing it near the pan affects the numerical value

Specifications

-	
Ion Generation Method	AC corona discharge method
lon Balance	±10 V
Effective Static Removal Range	Approx. 400 mm from the outlet
Static Elimination Time (approx.)	1 second (Typical value) (from ±1000 V to ±100 V)
Ozone Concentration	0.06 ppm
Electrode Probes	Tungsten (durability: 30,000 hours)
Weight	Approx. 710 g (Main unit: 395 g, Stand: 315 g)
Operating Temperature and Humidity	0 °C to + 40 °C, 25 % RH to 85 % RH (non-condensing)
Rated Electric Power Supply	DC 24 V, 1.0 A

Analytical Balances

Multi Functional Analytical Balances

UniBloc Analytical Balances

AUW-D series dual-range semi-micro balances AUW/AUX/AUY series analytical balances

Excellent Weighing Performance

 Compact UniBloc mechanism and digital processing technology produce fast response and stability at the same time.

For Applications

- Shimadzu's unique Balance Keys (https://www.shimadzu.com/an/balance/balance_keys/)
- Measurement results can be transmitted to Excel® or other Windows® applications without installing any additional software on your computer. All you have to add is one RS-232C cable.
- Piece counting, various mass units, below-weigh hook, specific gravity measurement software are all standard features.

AUW-D/AUX/AUY Series **AUW Series**

Choose the model according to your field

Excellent response, stability and zero return performance - in a semi-micro balance.

PSC (Perfect Self-Calibration) (AUW-D/AUW/AUX series only)

Automatically calibrates the balance if an ambient temperature change occurs that could affect sensitivity.

Clock-CAL

This automatically calibrates the balance at pre-specified times (such as before starting work, during lunch, or after work hours).

Internal Calibration (AUW-D/AUW/AUX series only)

The balance has built-in motor-driven calibration weights. Sensitivity can be calibrated whenever needed with a single key press.

ISO Calibration Report

Simply connect an optional printer to automatically print out which balance was calibrated when, and the calibration results. Absolutely no troublesome settings are required. Furthermore, the current date and time can be printed at anytime during measurement.

Interval Timer (AUW-D/AUW/AUX series only)

Data can be automatically output at time intervals set in the range from 1 second to 99 minutes 59 seconds. This function can be combined with Balance

Piece Counting

A built-in piece counting function enables balances to be used as parts counters (piece scales).

RS-232C Interface

All models are equipped with an RS-232C interface for easy integration with other devices and computers.

Specific Gravity Measurement

Installing the optional SMK-401 specific gravity measurement kit transforms the balance into a dedicated instrument for measuring specific gravity or density. Specific gravity measurement software is already installed in the Shimadzu balance.

Measuring Carats

The balance supports measurements in carats. momme, percent, and a variety of other measurement units. (The unit momme is only used for measuring pearls.)

AT-R Series

Analytical Balances

AT-R series

Basic Model with Improved Convenience

- Freely set responsiveness or stability
- Perform stable measurements in combination with an ionizer
- Connect with a computer via USB or RS-232C

Basic Models of Analytical Balances

PSC (Perfect Self-Calibration) (ATX-R only)

Automatically calibrates the balance if an ambient temperature change occurs that could affect sensitivity.

Internal Calibration (ATX-R only)

The balance has built-in motor-driven calibration weights. Sensitivity can be calibrated whenever needed by a single key press.

Computer Connection Function

Systems can be connected to a computer via an optional cable/adapter kit. For more details, visit the Shimadzu website.

RS-232C Interface

All models are equipped with an RS-232C interface for easy integration with other devices and computers.

USB Interface

A USB connector is built in for connecting to a PC.

Piece Counting

A built-in piece counting function enables balances to be used as parts counters (piece scales).

Checkweighing

This displays pass, high, or low judgments.

Measuring Carats

The balance supports measurements in carats, momme, percent, and a variety of other measurement units. (The unit momme is only used for measuring pearls.)

Percentage Measurement

Measures a percentage value with respect to a preset reference.

Formulation Mode

This is convenient when formulating (preparing) multiple substances.

Easy Setting

Stability-focused (S) when vibrations become a concern

PSC (Perfect Self-Calibration) (UP-X series only)

Automatically calibrates the balance if an ambient temperature change occurs that could affect sensitivity.

Clock-CAL (UP-X series only)

This automatically calibrates the balance at pre-specified times (such as before starting work, during lunch, or after work hours).

Internal Calibration (UP-X series only)

Enables calibration by pressing a single key with one finger. That ensures calibration can be performed whenever needed.

Printout with Date and Time

If a printer (optional) is connected, then data can be marked with the date and time. Calibration results can also be marked with date and time, which is perfect for managing measurements or establishing traceability as required by GLP/GMP/ISO 9001 standards.

ISO Calibration Report

Simply connect an optional printer to automatically print out which balance was calibrated when, and the calibration results. Absolutely no troublesome settings are required. Furthermore, the current date and time can be printed at anytime during measurement.

Backlight LCD

This backlit LCD can be clearly read even in the darkest of environments.

Checkweighing

By specifying upper and lower limit values in advance, the comparator indicates whether the sample weight passes the criteria, is too heavy, or is too light.

Comparator Output

Acceptable, high, or low weight results or other pass/fail results can be indicated by an audible sound or output externally as a contact signal. (Optional comparator audible indicator or relay output interface required.)

Measuring Carats

The balance supports measurements in carats, momme, percent, and a variety of other measurement units.

(The unit momme is only used for measuring pearls.)

Computer Connection Function

Systems can be connected to a computer via an RS-232C cable or using a USB-serial adapter kit. For more details, visit the Shimadzu website.

Piece Counting

A built-in piece counting function enables the balance to be used as a parts counter (counting balance).

Specific Gravity Measurement Function

The built-in specific gravity measurement function is based on the liquid immersion method. By installing the specific gravity measurement kit (optional), the balance can be used as a hydrometer.

Electronic Balances

Electronic Balances

TW/TX/TXB series

The beginning of the new standard. Extremely capable, but easy to operate.

Internal Calibration

Press just two keys to calibrate the balance whenever calibration is necessary (TW only). Calibration is very fast, taking only 15 sec.

Easy Setting

Quickly adjust the desired ratio of stability and response for every application, even during measurement, with one-touch operation.

Menu Operation Key

Menu navigation keys are separated from weighing operation keys and arranged in a familiar 5-way navigation circle. Up, Down, Right, Left and Enter are the simple operational steps.

Dry Battery Operation

Power the TXB series balances with an AC adapter or

Piece Counting

Unit weights of up to five different samples can be easily entered, stored and recalled for use.

Measuring Carats

In addition to grams (g), weigh in %, number of pieces, ct, kg, mg, lb, oz, TTI, etc. or a custom conversion unit, more than 20 units in all. Change quickly from display of % or counting to gram weight (g) display.

Checkweighing

Compare samples to target values or pass/fail criteria and clearly indicate the results.

Moisture Analyzer

MOC-120H

Moisture Analyzer with a Wide Sample Pan

Measure the Moisture Ratio of Even Large or Large Amounts of Samples

- The moisture ratio is found by heating the sample with the built-in infrared heater.
- The sample pan measures 130 mm in diameter, which is optimal for large and large amounts of samples.
- Importing results to a PC is easy (equipped with the Balance Keys function).
- Equipped with the UniBloc aluminum block mass sensor.

MOC-120H

MOC-120H

Model	MOC-120H
Measurement Method	Infrared heating/dry mass measurement
Pan Size	130 mm dia
Minimum Weight Displayed	0.001 g
Moisture Ratio Measurement Range	0.01 to 100.00 %
Minimum Moisture Ratio Displayed	0.01 %
Maximum Sample Quantity	120 g
Measurement Modes	Automatic operation mode, Timed operation mode, High-speed drying mode, Low-speed drying mode
Drying Heat Source	Medium wave infrared quartz heater
Temperature Settings Range	30 to 200 °C (1 °C steps)
Unit Dimensions and Weight	W 220 × D 415 × H 190 mm, 4.5 kg
Operational Temperature and Humidity Range	5 to 40 °C, relative humidity of 85 % max.
Required Power Supply	100 to 120/220 to 240 VAC, 640 W max.
Accessories	Sample pan × 2, pan holder, windbreak, sample pan tongs, aluminum sheet × 20, spatula

Printer

Drying conditions during measurement and the final measurement value can be graphed and printed.

Optional Accessories

Description	
Printer Set Includes a Connection Cord and 1 Roll of Printer Paper (The	rmal paper)
Printer Paper (10 rolls)	
RS-232C Cable	
Sample Pan	
Aluminum Sheets (500 pcs)	
Temperature Calibration Kit *1	
Protective Display Cover (5 pcs)	

*1 Temperature calibration using the optional Temperature Calibration Kit may be necessary depending on the measurement sample and the measurement conditions. Temperature calibration makes it possible to control the drying temperature of the measurement sample more accurately.

Warning

- Use this balance to heat samples to evaporate moisture for measurement.
- The built-in heater will be hotter than the set temperature.
 Samples must not be measured if there is a risk of an explosion or fire, or
- a dangerous chemical reaction from heating.

Sample Output from Optional Printer

MOC63u

Easy, Reliable Moisture Content Measurements

This Unit Makes Moisture Content Measurements Quick and Easy

- The moisture ratio is found by heating the sample with the built-in halogen heater to drive out the moisture
- The measurement procedure is simple. Just close the heater cover to start the measurement (automatic starting mode).
- Measurements are faster than the loss on drying method using a dryer.
- A USB connector makes connecting to a PC easy (built-in Balance Keys
- Equipped with the UniBloc aluminum block mass sensor.

This product is certified as Shimadzu's Eco-Products Plus. Energy Saving: Power consumption reduced by 30% as compared to a conventional Shimadzu product.

The sample pan size is a spacious 95 mm dia.

Generally, the wider, thinner, and more uniformly the sample is spread, the more precise the measurement. Uniform heating is provided by adopting a cleverly shaped

- 1 A cross-shaped key layout has been adopted for excellent operability.
- (2) A real-time indicator has been adopted, which blinks to show the measurement status.
- (3) The results are shown as a percentage using a backlit LCD to enhance visibility.
- (4) Graphics are provided to let you confirm the pan status in real time.

The sample is easy to see! Wide observation window

A Total of Five Modes Makes This Balance Compatible with a Variety of Sample Measurements **Ending Modes**

Automatic Ending Mode

This automatically ends measurement when the moisture change (% margin) over 30 seconds drops below a set value.

Timed Ending Mode

This automatically ends measurement after a preset amount of time (t1).

Alternate Drying Modes

The sample is dried at the highest temperature for the initial drying stage, and when the moisture has been reduced, it returns to the set temperature, shortening the measurement time.

Slow Drying Mode

This gently heats samples that might form a surface film or are prone to degrading at high temperatures.

Step Drying Mode

Drying conditions are changed step by step for samples that contain a lot of moisture, such as surface water or crystallization

Marning

- Use this balance to heat samples to evaporate moisture for measurement.
- The built-in heater will be hotter than the set temperature.
 Samples must not be measured if there is a risk of an explosion
- or fire, or a dangerous chemical reaction from heating.

Simple Operation

Select the automatic starting mode, place the sample, and close the heater cover to start the measurements. The preparation for measurement is so simple that you do not even have to press the start key.

A Wealth of PC Connection Functions

A built-in USB connector allows connecting to a PC. It can be used in conjunction with the Balance Keys function.

For USB port connections, check the Shimadzu website or contact your Shimadzu representative.

MOC63u 0.001 g / 0.01 %

Moisture Analyzer

MOC63u Application Examples

Food Industry

Measurement of Milk

- Fiberglass sheets for liquid measurement were used to promote liquid evaporation.
- Two measurement conditions were used, timed ending and automatic ending modes. Essentially the same average values were obtained. With samples whose principal component has a relatively high evaporation temperature and also contains moisture, the same results will be obtained regardless of the mode used.

Measurement Conditions: 140 °C/Timed 10 min

	MOC63u	
	Sample Mass (g)	Moisture Content (%)
1st	1.081	87.70
2nd	1.025	87.61
3rd	1.031	87.68
Average		87.66
Standard Deviation		0.047
CV (%)		0.05

Drying Curve for Milk in Timed Ending Mode

Milk before Drying

(Before measurement) 1 g of milk was dripped on to a fiberglass sheet for liquid measurement.

Milk after Drying

(After measurement) The moisture has evaporated from the milk, and the remaining fats have yellowed slightly.

Food Industry

Pharmaceuticals and **Cosmetics Industries**

Measurement of Corn Starch

- Approx. 5 g of corn starch was added to the pan and was spread over the entire surface using the tip of a spoon.
- · No change in appearance was evident after drying.
- Favorable repeatability of 1 % max. was obtained.

Measurement Conditions: 180 °C/Automatic 0.02 %

	MC	C63u	
	Measurement Time	Sample Mass (g)	Moisture Content (%)
1st	9:49	5.133	12.27
2nd	9:14	4.910	12.10
3rd	9:12	5.097	12.14
Average			12.17
Standard Deviation			0.09
CV (%)			0.73

Drying Curve for Corn Starch in Automatic Ending Mode

Corn Starch before Drying

(Before measurement) The sample powder was spread evenly over the pan.

Corn Starch after Drying

(After measurement) There was basically no change in appearance.

The table below summarizes moisture ratio measurements for various samples using the moisture analyzer.

	Sample Measurement Mode		Set Temperature	Measurement	Moisture

Note 1: Measurement times, moisture ratios, and CV (%) values are aggregated from three data cycles. Note 2: The CV (%) is the standard deviation divided by the average value, multiplied by 100 to represent it as a percent.

Electronic Printers

EP-100/EP-110

Enhanced Support for ISO/GLP/GMP

 Includes Functionality for Preventing Date Alterations

EP-110

EP-100/110 Shared Functionality

- Built-In Clock Date/time can be printed even for balances without a clock function.
- Customized Printing In addition to weight measurement values, print items can be added to the end.
- Easy Communication Settings Includes functionality (automatic setting function) that automatically sets communication settings based on the given balance.

Note: This function is disabled for ELB series models and MOC63u moisture analyzers.

Titles for measurement values can be customized for printing.

Compatible Balance Models AP, AU, AT-R, AT, U, TX, TXB, BX/BW-K, BL, and ELB series, and MOC63u moisture analyzers.

Note: The automatic setting function cannot be used with models that do not include the PRINT key, such as ELB series balances and MOC63u moisture analyzers.

Connection Cable

EP-110 Function

Supports GLP/GMP Using Password Protection-Based Date/Time Alteration Prevention

Powered by Rechargeable Batteries

Eliminating the need for an AC adapter connection, the printer can be used as a portable device. It also means the printer can be used in locations without a power supply outlet, such as within a fume hood. Note: Dry cell batteries cannot be used (compatible with nickel metal hydride batteries).

Status Display with Enhanced Visibility for OLED Display

The OLED display makes it easier to determine the measurement mode-based status. The OLED display also ensures visibility even in dark locations.

Attach Optional Kit for Use as a Specific Gravity Analyzer

When combined with an optional specific gravity measurement kit, balances can be used to measure specific gravity.

Operations are simplified by a text-based navigation function. By using sinkers, the specific gravity of liquid can be measured as well. This allows easily measuring the specific gravity of metals, rubbers, plastics, and other materials.

SMK-601 specific gravity measurement kit

First measure the in-air weight.

Then place it in the container filled with water, as instructed on the screen.

The specific gravity value is displayed using simple steps.

Specific Gravity Measurement Kit

Model	SMK-601

Note: The optional liquid density sinker is required for liquid density measurements.

Optional Accessories Description Liquid Density Sinker Petri Dish, Square

AT-R Series

Specific Gravity Analyzer

Measures a Variety of Gravity Values with the Immersion Method

Attach the optional SMK-401 Specific Gravity Measurement Kit to a balance in the AU series, and set the balance to specific gravity measurement mode. You can then use the balance as a specific gravity analyzer, capable of automatically calculating and displaying specific gravity values.

Liquid density can also be measured by using an optional sinker.

Various balances are available, including a semi-micro (0.01 mg) model. Choose the model best suited to the sample amount and required precision in your application.

Two kinds of weighing pans as standard.

For standard sample

Optional Accessories

•
Description
Liquid Density Sinker for SMK-101A/102

- *1 The optional liquid density sinker is required for liquid density measurements.
 *2 For UP-X/UP-Y series large-pan (170 × 180 mm) types. The actual capacity is 100 g less than the capacity of the balance.
 *3 For UP-X/UP-Y series small-pan (108 × 105 mm) types. The actual capacity is 290 g less than the capacity of the balance. Cannot be attached to the UP223X/UP223Y.

In addition to the above-mentioned, balances with the 📴 mark are equipped with a specific gravity calculation function, so they can be used for specific gravity measurement.

UW/UX series

Measures a Variety of Specific Gravity Values with the Immersion Method

Attach the optional SMK-101/102 Specific Gravity Measurement Kit to a balance in the UW/UX series, and set the balance to specific gravity measurement mode. You can then use the balance as a specific gravity analyzer, capable of automatically calculating and displaying specific gravity values.

Liquid density can also be measured by using an optional sinker.

Various balances are available. Choose the model best suited to the sample amount and required precision in your application.

The large submersible pan makes it easy to measure bulky samples.

	SMK-102 for small pan*1*3

Optional Accessories

Description
Liquid Density Sinker for SMK-101/102

- *1 The optional liquid density sinker is required for liquid density measurements.
- *2 For UW/UX series large-pan (170 × 180 mm) types. The actual capacity is 100 g less than the capacity of the balance.
 *3 For UW/UX series small-pan (108 × 105 mm) types. The actual capacity is 290 g less than the capacity of the balance. Cannot be attached to the UW/UX 220H.

In addition to the above-mentioned, balances with the 🛅 mark are equipped with a specific gravity calculation function, so they can be used for specific gravity measurement.

Attach an optional animal bucket to a UP series

balance, and set the unit to animal mode. The balance can now be used as a user-friendly animal balance.

F Series

Animal Balances

Quick, Stable Measurements of Animal Weight

Bucket for small animals

Deep round bucket

Rectangular bucket

Clock-CAL

This automatically calibrates the balance at pre-specified times (such as before starting work, during lunch, or after work hours).

Internal Calibration

The balance has built-in motor-driven calibration weights. Sensitivity can be calibrated whenever needed with a single key press.

Built-in Animal Measurement Mode

- When the animal is unloaded, residual weight from excretions and other materials is automatically subtracted and the display is set to zero. The next animal can be loaded without pressing the TARE button, which increases efficiency.
- Thanks to the specially developed animal measurement software, the weight of moving animals is measured quickly and stably.

UP-X Series

UP-X/UP-Y Series (balance)

Model		S	tandard mode	ls		Models with built-in calibration weights						
	UP2202Y	UP4202Y	UP6202Y	UP4201Y	UP8201Y	UP2202X	UP4202X	UP6202X	UP4201X	UP8201X		
Capacity	2200 g	4200 g	6200 g	4200 g	8200 g	2200 g	4200 g	6200 g	4200 g	8200 g		
Minimum Display	0.01 g	0.01 g	0.01 g	0.1 g	0.1 g	0.01 g	0.01 g	0.01 g	0.1 g	0.1 g		

Bucket

Small Animal Bucket	Shape: round / Size: bottom 110 dia. × top 200 dia. × height 130 (mm)
Deep Round Bucket	Shape: round / Size: bottom 155 dia. × top 195 dia. × height 200 (mm)
Rectangular Bucket *1	Shape: rectangular / Size: bottom 250 × 210; top 290 × 250; height 150 (mm)

^{*1} The rectangular bucket can only be attached to the UP8201X and UP8201Y. Note: Can also be used with the UW/UX Series.

Three movement levels can be selected corresponding to the animal movement.

Animals can be measured whether they are docile or extremely active.

When the animal is loaded and the stability mark is displayed, the weight is output automatically. Needless operation is eliminated to increase efficiency.

When the animal is unloaded, residual weight from excretions and other materials is automatically subtracted and the display is set to zero.

The next animal can be loaded without pressing the TARE button, which increases efficiency.

Animal Balances

Quick, Stable Measurements of Animal Weight

BW-K/BX-K series

Attach an optional animal bucket to a BW-K/BX-K series balance, and set the unit to animal mode. The balance can now be used as a user-friendly animal balance.

Built-in Animal Measurement Mode

- Models with a range of capacities are available. Ideal for medium weight measurements of rabbits and small dogs.
- Thanks to the specially developed animal measurement software, the weight of moving animals is measured quickly and stably.
- When the animal is unloaded, residual weight from excretions and other materials is automatically subtracted and the display is set to zero. The next animal can be loaded without pressing the TARE button, which increases efficiency.

Medium bucket set

LabSolutions Balance

Integrate Analysis Data Acquired from Balances to Analytical Network Data System Compliant with PIC/S GMP and ER/RS Regulations

Improves Operational Efficiency and Data Reliability

- Eliminate manual entry; all the weighing data are saved automatically in a safe database without transcription mistakes.
- Reports appropriate for weighing methods, such as the mass variation test, drying weight
 loss test and particle size test, can be created automatically after the measurement. In
 addition, customized reports featuring such information as system conformance, content
 uniformity and elution tests together with the analysis results obtained by HPLC, etc. can be
 created.

Main Window of LabSolutions Balance

Integrated Management of Analytical Data on Network System Using LabSolutions

Compliant with the Latest Data Integrity Guidance (U.S. FDA 21 CFR Part 11)

- Weighing results can be automatically saved in the database together with other information, including sample ID, operator name, operation date and series number of instrument used. This enables quick data searching based on sample information.
- It allows setting up user authority to ensure only the authorized user can create a template for weighing.
- It prevents improper manipulation or unintended overwriting and deletion of data. In addition, measurement results and all the operation histories and reasons will be saved in the database as log files.

LabSolutions Data Manager

Integrated Report Creation Function Combines Analysis Results from HPLC and Weighing Results from Balance

Note: Multi-data report creation (optional) is necessary to use this function.
